LIGHTING SENSITIVITY

L

E

Angle series is an integrated residential downlight solution for better performance and installation. This collection has Angle and Angle PRO to meet more needs accordingly.

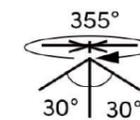

Angle series is very installation-friendly. it's low profile(45mm and 55mm height) and insulation coverable, which can be installed in plaster ceilings and concrete ceilings.It's available in triac and DALI dimming. The driver is configured with a power selectable function(8W-10W) and is tool-free with a quick connector(loop in&out). It also allows a max.16mm conduit to be put in.

Angle, with the adjustability of $355^{\circ} \times 30^{\circ}$, considers the most common requirements, IP54, switchable CCT, and compatible cutout(68mm and 83mm).

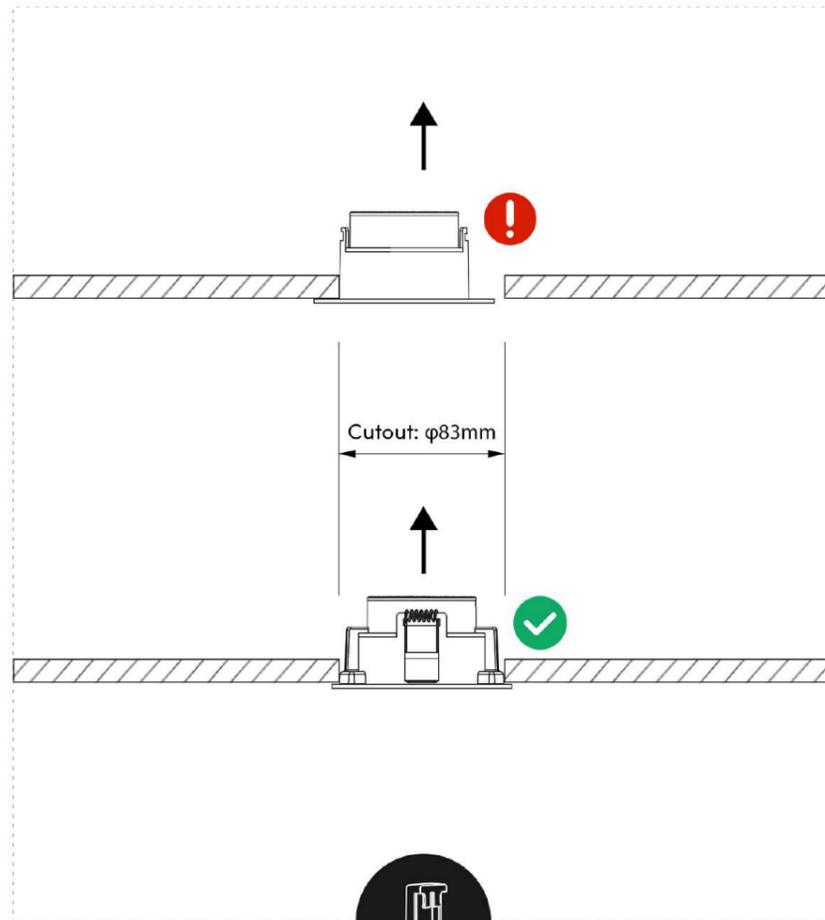

Angle PRO, with the adjustability of all way 360° , considers the more demanding requirements, IP65, more functional LED options like super high CRI97 or tunable, and interchangeable optics including honeycomb to lessen the glare.
